

LANDesk Software Development Kits

LANDesk® Software Development Kits (SDKs): The freedom to improve your business processes, increase service levels, protect corporate data and comply with regulatory requirements. And access to tight integration with LANDesk's comprehensive systems and security management tools.

LANDesk SDKs include everything you need to integrate LANDesk® technologies into your own environment. A message-based SDK lets you develop without requiring access to LANDesk code or development environment. And without requiring that LANDesk access your code or development environment either. You and your development team are free to independently develop solutions that work for your enterprise environment without exposing your enterprise's strategic intellectual property.

Use the code—and objects—you're already familiar with and rapidly develop your own solutions that extend your use of LANDesk® systems and security management technologies and let you create new opportunities with your own customers. Solutions that work with the same single console simplicity you've come to depend on from LANDesk.

Key Benefits

- Gives you the freedom to leverage LANDesk functionality to improve your business processes, increase service levels, protect corporate data and comply with regulatory requirements.

- Lets you develop without requiring access to LANDesk code or the LANDesk development environment and without LANDesk requiring access to your code or development environment.

- Uses easy-to-simulate messages so that each party can develop independently.

- Gives you a high level of abstraction for tight integration with future LANDesk® releases.

- Uses familiar LANDesk code and objects to facilitate rapid development time.

Available LANDesk® SDKs

Two LANDesk SDKs are available. Install one or both and enjoy the convenience of a single searchable help file.

- Message-Based SDK for LANDesk® Management Suite
- C++ API SDK for LANDesk® Management Suite
